

Look at the program for Level 80 in Blockly and Python. Compare the two languages.

```
1 import van
2
3 v = van.Van()
4
5 v.move_forwards()
6 v.turn_left()
7 v.move_forwards()
8 v.turn_right()
9 v.move_forwards()
10
```

Write notes about what is similar and what is different about the two sets of code. Can you match the code in Python to the Blockly code?
