

Look at the program for Level 80 in Blockly and Python. Compare the two languages.

Can you debug the code in Python in the box below, for the same program, to make it work?
(Hint: there are mistakes on three lines of code)

```
import van
V = van.Van()

while not (v.at_destination()):
    if v.is_road('FORWARD'):
        v.move_forwards()
    elif v.is_road( LEFT ):
        v.turn_left
    Else :
        v.turn_right()
```
